

Introduction to typography for OJW

To create a cohesive typographic system using **Inter**, we need to leverage its excellent X-height and legibility. Inter is a variable font, which means we can be precise with weight and tracking (letter spacing) to create a clear hierarchy.

Below are the typography specifications using a **Major Second (1.125)** scale for a modern, balanced look.

Global Base Styles

- **Primary Font:** Inter (Sans-serif)
- **Smoothing:** Antialiased
- **Text Color (Default):** #1A1A1A (Rich Black)
- **Base Size:** 16px

Element	Size (px)	Weight	Line Height	Letter Spacing
H1	48px	700 (Bold)	57.6	-0.02em
H2	36px	600 (SemiBold)	46.8	-0.01em
H3	28px	600 (SemiBold)	36.4	-0.01em
H4	22px	500 (Medium)	30.8	0
H5	18px	500 (Medium)	25.2	0
H6	16px	600 (SemiBold)	24	0.01em
Body (P)	16px	400 (Regular)	25.6	0
Link	16px	500 (Medium)	25.6	0

Interactive Element: Links

Inter looks best when links have a slightly heavier weight than the body text to ensure they stand out without relying solely on color.

- **Default State:**
 - **Weight:** 500 (Medium)
 - **Color:** #0055FF (Primary Brand Blue)
 - **Decoration:** Underline (1px offset)
- **Hover/Active State:**
 - **Color:** #0033AA
 - **Transition:** 0.2s ease-in-out
- **Visited State:**
 - **Color:** #663399 (Deep Purple)

Implementation Notes

- **Optical Sizing:** Inter includes an "Optical Size" feature. For headings (H1–H3), ensure `font-optical-sizing: auto;` is enabled to tighten the letterforms.
- **Negative Tracking:** For large displays (H1 and H2), Inter often benefits from slight negative letter-spacing (`$-0.02em$`) to look more "editorial" and premium.
- **Mobile Scaling:** On mobile devices, I recommend scaling the H1 down to **32px** and H2 to **28px** to prevent awkward line breaks.

CSS Variables & Base Setup

```
CSS
:root {
  /* Font Family */
  --font-main: 'Inter', system-ui, -apple-system, sans-serif;

  /* Weights */
  --fw-regular: 400;
  --fw-medium: 500;
  --fw-semibold: 600;
  --fw-bold: 700;

  /* Colors */
  --text-main: #1A1A1A;
  --link-color: #0055FF;
  --link-hover: #0033AA;
}
```

```
body {
  font-family: var(--font-main);
  color: var(--text-main);
  line-height: 1.6;
  -webkit-font-smoothing: antialiased;
}
```

Header & Link Styles

CSS

```
h1, h2, h3, h4, h5, h6 {
  margin-top: 1.5em;
  margin-bottom: 0.5em;
  font-weight: var(--fw-semibold);
  line-height: 1.2;
}

h1 {
  font-size: 48px;
  font-weight: var(--fw-bold);
  letter-spacing: -0.02em;
}

h2 {
  font-size: 36px;
  letter-spacing: -0.01em;
}

h3 { font-size: 28px; }
h4 { font-size: 22px; font-weight: var(--fw-medium); }
h5 { font-size: 18px; font-weight: var(--fw-medium); }
h6 { font-size: 16px; text-transform: uppercase; letter-spacing: 0.05em; }

/* Link Styles */
a {
  color: var(--link-color);
  font-weight: var(--fw-medium);
  text-decoration: underline;
  text-decoration-offset: 3px;
}
```

```
    transition: color 0.2s ease;
  }

a:hover {
  color: var(--link-hover);
}
```

Mobile Responsiveness

```
CSS
@media (max-width: 768px) {
  h1 { font-size: 32px; }
  h2 { font-size: 26px; }
  h3 { font-size: 22px; }
}
```

Visual Preview of Hierarchy

Pro Tip: Since Inter is a variable font, if you are using the Google Fonts version, make sure your import includes the full weight range: `wght@400;500;600;700`.
